The contemporary touch of classic design

A classic is a classic because it always has a fresh look.

Even today Verner Panton's design is outstanding and edgy.

Being one of the true rebels and pioneers in the world of lighting and furniture design, Panton has become an icon. Devoted and so true to his visions and ideas that his creative language shocked his surroundings when he started designing and continues to leave people amazed today.

Adding a touch of Panton between any 4 walls instantly transforms the room. For many years we have produced his famous lamps at Verpan, carefully merging quality and originality in order to create a lamp that lights up the room even when it's turned off.

We have now expanded our Verner Panton range and are introducing a new collection of furniture and rugs from the Verner Panton archives.

It's amazing to experience how these old, visionary designs can make a room come to life today, instantly elevating and upgrading the surroundings.

To us, that is what it's all about. Upgrading spaces, people and experiences in everything we do. That is why we not only produce the finest Verner Panton products, but are also known for our exquisite service and attention to detail.

Welcome.

Step inside the world of Verpan and Verner Panton.

Certificate of authenticity

The Verner Panton lamps and furniturs from Verpan A/S are original and unique.

Each product is carefully assembled, wrapped and shipped by the dedicated employees at Verpan A/S.

The signed and sealed certificate of authenticity that comes with your new product ensures you a true piece of design crafted entirely to match Verner Panton's high standards in every aspect.

We are a certified producer and seller and own the right to produce the lamps and furniture under license from the Verner Panton Estate (Basel, Switzerland).

Verner Panton

13 FEBRUARY 1926 – 5 SEPTEMBER 1998

Even if Verner Panton's creative output was reduced to the eponymous Panton Chair, his name would still be assured in the pantheon of modern design. With the Panton Chair, the first example of single-formed injection moulded plastic seating, Panton succeeded in creating one of the most daring and famous chair designs of the twentieth century.

Born on the island of Funen in Denmark, Panton came to design, like many of his colleagues, via the study of architecture at the Academy of Art in Copenhagen. After graduating, Panton landed an apprenticeship at the office of Arne Jacobsen, assigned to assist the master on the iconic "Ant" Chair. Although deeply influenced by the organic forms of Jacobsen and others typical of 1958, Panton first established himself at the forefront of avant-garde design with furniture based on extravagant, geometric forms and use of strong colors, such as the Cone Chair of 1958.

Along with the Panton Chair, which was designed in the early 1960's, but was not put into production until 1967 due to its technical challenges, these designs cemented Verner Panton's reputation as a designer of an original and uncompromising approach.

Working with renowned manufacturers such as Fritz Hansen, Louis Poulsen, and Vitra, Panton fearlessly pushed technology to its limits and produced design icons such as the "VP Globe" Lamp and the "System 1 2 3 series". It was not the design of singular objects, however, that interested Panton. Rather, it was his comprehensive design philosophy, his development of complementary groups of furnishings and the designer of entire spaces, that set Panton apart.

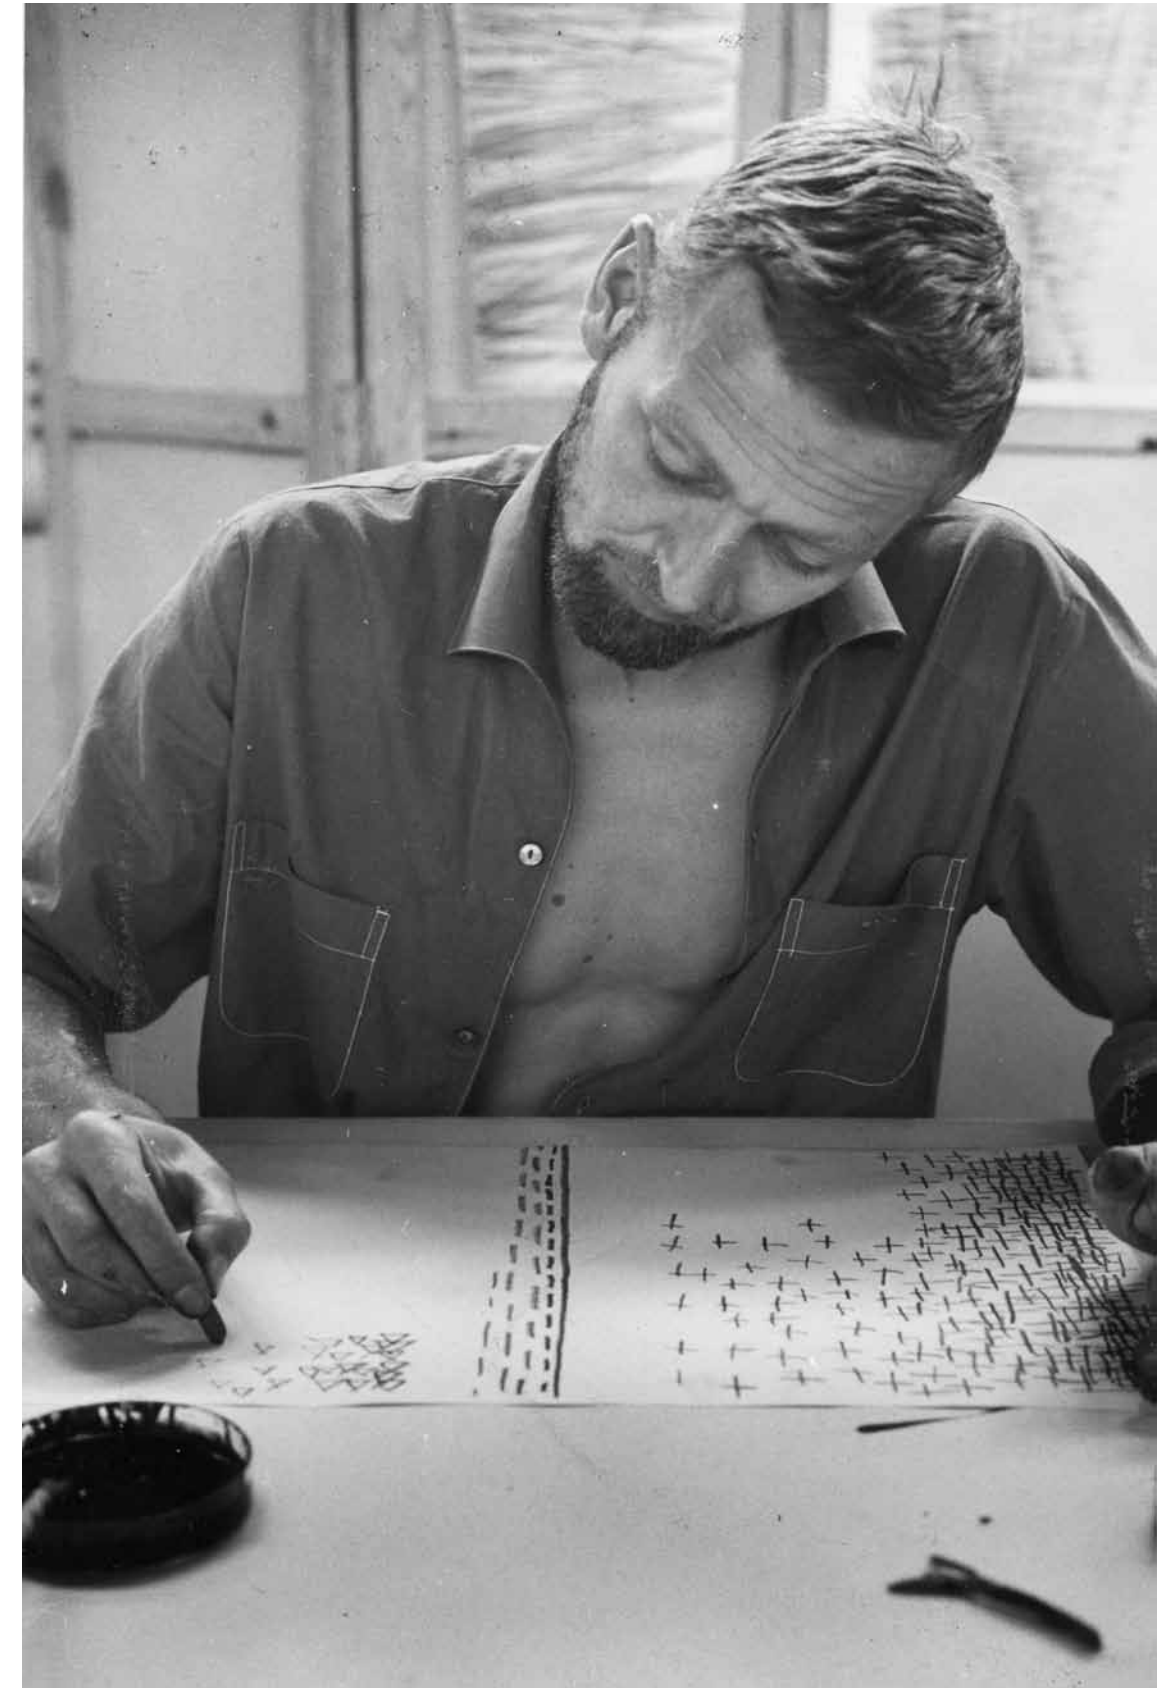

Drawing on his architectural background, Panton designed ground-breaking domestic living spaces – fusing disparate elements such as floor, wall, furniture, lighting, and textile – into wholly original and indivisible interiors.

The effects of these spaces, with Panton’s characteristic preferences for geometric shapes and intense colors, melded seamlessly with the emerging psychedelic sensibilities.

It was the emotional properties of these interiors that Panton was after, along with an inherent preoccupation with technical and aesthetic solutions, that typified the unique qualities of his designs and his kaleidoscope vision.

VERNER PANTON LOVED TO DRAW AND EXPLORER NEW DESIGN IDEAS

Verner Panton
Barboy
1963

Barboy is a mobile storage piece produced in moulded wood and comprising four cylindrical parts. Two of the elements swing out to function as tables. Verner Panton designed Bar Boy in 1963 when he was living in Basel, Switzerland. During this period, Panton was particularly interested in designing furniture that allowed greater flexibility in the interior design and he often mounted his designs on wheels.

A new series of carpets with Verner Panton motifs.
Most people know Verner Panton as a furniture designer. But Panton designed home textiles as well and was affiliated for many years with the Swiss textile firm Mira-X. The motif for the new Panton carpets comes from the ‘Grande’ textile from 1975, which consists of geometric circle patterns.

Made of 100% New Zealands Wool.

Fun Mother of Pearl

1964

The lamps in the Fun series are composed of metal or mother of pearl round discs which are flexibly connected with one another by small metal rings. Arranged in chains of varying length, the discs are either suspended from a metal ring or - in the case of the larger models - a round ceiling plate.

Depending on the number and length of the chains of discs, the lamps take different shapes. The bulb is in each case located in the center. The heat emitted by the bulb creates thermal radiation that creates slight movement among the discs, which act as reflectors.

Moon
1960

The fan-shaped discs hide the bulb and at the same time serve as reflectors, through which a soft light is spread throughout the room. The Moon pendant is one of Verner Panton's earliest luminaires. It consists of ten ring-shaped blades positioned in such a way that they can move.

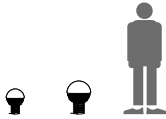

Model	Moon
Diameter	44.5 cm
Wire length	2.5 m white fabric

Model	Moon
Diameter	34 cm

Wire lamp is a table lamp made of a cylindrical wire frame ending with a hemisphere. The upper part of the lamp is equipped with a hemispherical plastic screens that come in yellow, white and brown. This lamp is just one of many that shows Verner Panton's talent with colours. He was especially known for creating explosions of colours and people stood in long queues to see his designs. For example, he did a show where everything was orange, it was called the Orangery, and it described Verner Panton like crazy - especially in the Danish press. Wire lamp is a sign of yet another explosion.

Lamps
Verner Panton
Ball TYPF
1969

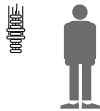

This lamp can be regarded as a further development of the Fun lamps. Instead of discs made of mother of pearl or metal Panton this time used plastic balls.

Special, warm and “alive” emanations are some of the characteristics of this unusual pendant designed by Verner Panton. The lamp is funky, fun, stylish and above all, it is very different.

It looks amazing when hung in groups.

Model	Ball TYPF
Diameter	44 cm
Height	115 cm

Lamps
Verner Panton
Ufo
1975

Variously sized, ring-shaped plastic tubes hung from metal chains form the complex spatial structure of the UFO lamps, which were designed in a number of different versions. The tubes hide the light source and at the same time serve as reflectors. The tubes are made of polycarbonat. The pendant consists of both white and red tubes.

That space age style can only be from one decade and indeed, it does date back to 1975, offering a series of suspended plastic hoops which acts as reflectors to create a light that's both bright and ornamental.

Verner Panton

Onion

1977

The Onion lamp is in form reminiscent of the cross section of an onion and consists of a large number of metal discs lacquered white, copper or silver. These hide the light source and at the same time act as reflectors.

The Onion pendant comes in two sizes. Besides the pendant the Onion is also available as table lamp.
